

“Willdan extends the reach of the communities we serve through contract staffing”

Contract Staff Support Services

- Capital Improvements Planning
- Funding Application Assistance
- User Rate Studies
- Special Assessments
- Planning Commission Services
- Contract Administration
- Construction Project Inspection
- Roadway Design, Inventory and Rehabilitation
- Impact Studies
- Community Outreach

Willdan contract staff support has supplied public agencies with both interim and long-term contract staff support for over 40 years. Public agencies have contracted with Willdan when it is not cost-effective to have a full-time engineer on staff; to relieve peak workload situations; or to fill vacant positions during a job search. Willdan has also provided to small or newly incorporated cities the functions of entire departments, such as building and safety, engineering, planning, or public works. In other instances, public agencies have retained Willdan personnel to serve as city engineers, building officials, case planners, public works directors, or project managers for large or unusually complex projects.

Our staff has wide-ranging experience in specialty areas such as civil, traffic, hydrology/hydraulics, and structural engineering; building permit processing; building and safety plan review; civil plan review and inspection; code enforcement; community development block grant administration; mapping and improvement plan checking; building and public works construction inspection; National Pollutant Discharge Elimination System (NPDES) services; public works design; construction management; assessment districts; and grant development.

Many of our staff members have served as government agency staff prior to joining Willdan, providing a genuine understanding that when we serve in contract staffing assignments we are the agency's staff, serving at the request of its council and citizens. In addition, our staff has extensive experience conducting and participating in public meetings, addressing residents' concerns and developing a consensus toward the community goals. We are especially proud of our ability to come up with sound, affordable solutions that address the resident's concerns providing long-term sustainable programs.

Willdan has had two primary objectives since our inception in 1964—ensuring the success of our clients and enhancing our surrounding communities. Working steadily toward these goals we gained a notable reputation for technical excellence, cost effectiveness, and client responsiveness in providing superior engineering and planning consulting services. In recent years Willdan has expanded our service offerings into several vital areas including financial and economic analysis, homeland security, environmental remediation, and sustainability. We have crafted this set of integrated services so that, in the face of our evolving environment—whether economic, natural, or built—Willdan can continue to extend the reach and resources of our clients.

Willdan Engineering offers a full complement of professional engineering and planning consulting services that encompass city and special district engineering, municipal planning, plan checking, building and safety, program/construction management, public works inspection, disaster recovery, survey and mapping, geotechnical and earthquake engineering, and infrastructure design. Our infrastructure design capabilities are wide-ranging and include traffic and transportation, water resources, flood control and drainage, structures, and landscape architecture. Unique to Willdan is our understanding of public agency needs and issues. Willdan professionals often serve to extend our clients' staff in the capacity of city engineers and other public agency positions. Additionally, many provide the added value of having served in public agency management positions prior to joining Willdan. With this depth of experience, expertise, knowledge, and resources, Willdan offers comprehensive solutions that are timely, cost effective, and tailored to meet the needs of individual communities.
